"Making real wood a real option."

Congratulations, you have just purchased one of the finest shooting platforms available today, certainly the best wooden stock. We wish to thank you for your order.

Warranty

All Accurate Innovations stocks are warranted to the original purchaser against manufacturing defects for a lifetime of shooting and hunting. This warranty covers issues that arise during normal use of the stock. It does not cover abnormal use/ accidents / abuse or minor imperfections in the wood and finish that are commonly found on wooden stocks. It also does not include normal wear and tear such as dings and scratches that testify that you did have some fun with your Accurate Innovations stock.

Accurate Innovations manufactures each stock under the highest of quality control. Each stock is fit to one of our trued up barreled actions. If you find issues with your Accurate Innovations stocks do not attempt to correct or modify it yourself with out our approval or guidance. Doing so will void your warranty.

Use of recoil inhibiting products and weighted shooting platforms that transmit recoil into your wooden stock rather than allowing the recoil forces to dissipate into your shoulder causes your rifle to act as a splitting wedge within your stock, and will void the warranty.

Return Policy

Call our Customer Service Dept. and get a RMA# (Return Merchandise Authorization). Place this number in large letters on the outside of the package. This is very important!!! Without this number the package will be refused and sent back to you at your cost. Please make sure to get your RMA#!!! We accept USPS, UPS, and Fed-Ex.

"Making real wood a real option."

Barreled Action Fit Policy

All customers are required to measure their barrel dimensions and sign off on the dimensions given. If you have given the wrong dimensions it will be at your cost. If you have any questions on how to measure your barrel you may call our customer service dept and we will walk you through it. If you wish to send your action in to us we would be glad to measure the barrel and fit it to your new custom-built Accurate Innovations stock.

All measurements should be taken from the front of the receiver forward.

Torque Specifications

Torque actions screws to 50-65 inch pounds (NOT ft-lbs) and recheck after firing the rifle its first time in the new stock. (This is good and snug but not overly tight for if you don't have access to a in-lb torque wrench.) Do not torque down the middle screw on actions such as Winchester M70's, Remington ADL's that have three screws. This should only be tight enough to not work its way out. Actions with screws in the recoil lug such as Weatherby and Howa also benefit from a dab of bedding under the recoil lug. If you are not planning to bed these actions, please torque the tang screw to 65 in-lbs first and tighten the front action screw much less, about 1/2. This will drastically reduce action and stock deflection since there is no wood to crush fit any more.

Portable torque wrenches are available from Accurate Innovations. They make a handy addition if you plan on traveling with your barreled action and stock separated in a short case.

In some circumstances, action screws from your rifle may not be long enough to secure the action to the new stock. If this occurs, please contact us.
